EXPERIENCE

Rabinnson Private Limited

Team Lead

Hyderabad, India

September 2025 - Present

- **Multi-Tenant Backend:** Spring Boot microservices with PostgreSQL, implemented role-based access control and audit logging across multiple legal entities.
- **SaaS Dashboard:** React frontend with real-time data visualization, filtering, and export capabilities for compliance workflows.
- **Third-Party Integrations:** Integrated payment gateways and identity verification APIs. Built CI/CD pipeline with Docker deployment automation.
- **Regulatory Compliance Automation:** Automated document tracking and audit trails across regulatory requirements, reducing manual review overhead.

PROJECTS

TRICOS - Co-operative Society Platform

September 2026 - Present

Client Project

- **Took ownership of a live co-operative-society platform:** a public site plus three role-scoped internal panels - admin, developer, and member - covering member records, applications, trainings, field activities, and notifications over a 17-table MySQL schema.
- **Migrated the legacy PHP API to Node.js:** rebuilt the endpoints as Express 5 routes and controllers with authentication, activity logging, and an S3-backed media pipeline, retiring the PHP surface without breaking the existing frontend.
- **Hardened it for production:** added TOTP two-factor authentication, Helmet and rate limiting, Razorpay payment verification, QR-code member ID cards, and a migration masking stored Aadhaar numbers; packaged the stack as a reproducible Docker Compose deployment with no default secrets.

Pothole Detection Platform

July 2026 - August 2026

Personal Project • github.com/debasisnishank/pothole-detection

- **Deployed a computer-vision service for municipal engineers:** FastAPI backend running a YOLOv8 model over dashcam video to detect potholes, geo-tag them from GPS, and export GeoJSON, CSV, and a marked-up video for repair crews.
- **Ran it in production on Google Cloud:** Docker Compose on a Mumbai GCE VM behind Nginx, with API-key auth injected server-side so the secret never reaches the browser, and versioned model weights fetched from Cloud Storage and checksum-verified at container start.
- **Built the field data-collection pipeline:** contributed to an Expo (React Native) + Express + PostgreSQL monorepo for GPS-tagged sample capture, admin review with annotation tooling, and collector settlements.

Khetscope - Satellite Farm Advisory Platform

July 2026

Personal Project • github.com/debasisnishank/kissan-alert-solution

- **Built a satellite-based advisory platform for Indian farmers:** a multilingual PWA that scores farm health from Sentinel-2 and Landsat NDVI, layers in weather, soil, and mandi price data, and returns personalised crop recommendations - alongside an admin panel and a bank-officer credit-assessment portal.
- **Wired AI and voice into the advisory loop:** Gemini 2.0 Flash on Vertex AI for crop-photo pest and disease identification and farm-aware chat, plus speech-to-text and Sarvam AI text-to-speech so advisories can be heard in 11 Indian languages.
- **Engineered it to survive provider outages:** every data domain falls back across free public APIs, a PostgreSQL-backed job queue (FOR UPDATE SKIP LOCKED, no external broker) drives the sync workers, and the app ships to Cloud Run through GitHub Actions using Workload Identity Federation.

Collector Simulator - Roblox Game

August 2026

Personal Project

- **Built a Roblox collector simulator in Lua:** a server-authoritative economy where coins, carry capacity, upgrades, and zone unlocks all live on the server, with clients rendering only pushed state and cosmetic effects.
- **Made it resilient and device-agnostic:** DataStore persistence is guarded throughout so the game degrades to no-save rather than failing, and a single input abstraction maps keyboard, gamepad, and touch onto camera-relative movement.

EDUCATION

Bachelor of Technology

Centurion University Of Technology and Management • 9.1

Bhubaneswar

2025

Higher Secondary

Adyant Higher Secondary School

86% , Bhubaneswar

2021

CERTIFICATIONS

Digital PGR Functional Training

EGov Academy • 2025

- Certified by Intense Technologies for citizen-centric service design and policy development.

J2EE

Wipro • 2024

- Certified in Java Full Stack Development by Wipro

COURSEWORK

Spring MVC, Spring Boot and Rest Controllers
Coursera • 2024 • Spring

Building Scalable Java Microservices with Spring Boot and Spring Cloud
Google Cloud • 2024 • SpringBoot

SKILLS

Languages: Java, TypeScript, JavaScript, Python

Backend: Spring Boot, Spring MVC, Hibernate, REST APIs, NestJS, Fastify, Hono, Express, FastAPI

Frontend: React, Next.js, Astro, Preact, Vite, Tailwind CSS, Bootstrap, PWA

Databases: PostgreSQL, PostGIS, MySQL, Neon, MongoDB, Redis, Drizzle ORM, TypeORM

Cloud & DevOps: Docker Compose, Google Cloud (GCE/GCS/Cloud Run), AWS S3, Vercel, Railway, Cloudflare, Nginx, GitHub Actions, Sentry

AI & Vision: Anthropic Claude API, Google Gemini (Vertex AI), OpenAI API, YOLOv8/Ultralytics, OpenCV

Tools: Git, Maven, pnpm, Turborepo, Linux
